RE: DOE FEMP  
MSL #531-0297  
OU2 IDW MANAGEMENT PLAN

Mr. Jack Craig  
Project Manager  
U.S. DOE FEMP  
P.O. Box 398705  
Cincinnati, OH 45329-8705

Dear Mr. Craig:

This letter is in response to your June 29, 1994 letter concerning an Operable Unit 2 Investigative Derived Waste Management Plan. 9, 1994. Ohio EPA concurs with DOE's plan for managing the OU2 waste prior to approval of the site-wide IDW Management Plan with the following conditions:

- The storage of the IDW within each waste management unit will occur until such time as a final remedial decision has been made for each waste management unit. At that time the waste will be remediated in accordance with the final decision.
- With the exception of the lime sludge and Active Flyash Pile flyash, the consolidate IDW material in each unit will be covered with mulch and seeded to limit runoff and erosion of the waste.
- Soil cuttings from the Active Flyash Pile must be stored within the silt fence surrounding the pile.
- The basis for segregating cuttings (soil vs. flyash) from the Inactive Flyash Pile is unclear. DOE should consolidating the flyash and soil at the top of the pile without fully penetrating the soil cover.

If you should have any questions, please contact me.

Sincerely,

Thomas A. Schneider  
Fernald Project Manager  
Office of Federal Facilities Oversight
